

America's Labor Market Analyzer (ALMA)[®]

The Most Sophisticated Analytical Tool for Labor Market Analysis and Economic Development

America's Labor Market Analyzer (ALMA)[®] is designed for analysts, economists, education providers, and statisticians who handle workforce-related data. ALMA offers real-time jobs and candidate analysis, as well as traditional data from every state in the country. The system analyzes transactional data, including advertised jobs data and candidate data, as well as cumulative data spanning eight years, gathered from job postings and traditional labor market information.

ALMA incorporates a user-friendly interface that allows users to access comprehensive, detailed labor demand data. Users can customize the configuration of their dashboards, as well as filter and display data in ways that are relevant and useful to their needs. The unmatched data available in ALMA can assist users with making informed labor market decisions.

ALMA Dashboard

Comprehensive Jobs and Résumé Data

ALMA provides access to aggregated advertised jobs and résumé data including skills, certifications, and tools and technology from advertised jobs. ALMA's sophisticated post-processing techniques extract information from advertised online job postings and résumés and categorizes them into distinct, detailed job skills, certifications, and tools and technology skills, based on the O*NET classification system.

Quality Data is the Difference

ALMA provides users with the most accurate economic data available, inclusive of historical and aggregated national jobs data. Geographic Solutions' commitment to quality sourcing and parsing of timely data gives analysts the ability to track the current state of job openings and the growth rates associated.

Individual users looking for a specific job posting can compare information such as wage rates, the total number of similar jobs available locally, and the competition in the job market, offering a true glimpse into the real-time job market. Economic developers are able to perform customized labor market trend analysis using information from both traditional and real-time supply-and-demand data.

Sample Wage Rates and Job Openings

Data Comparison Without Boundaries

ALMA users can analyze and compare labor market information seamlessly across state lines. ALMA shows side-by-side comparisons for multiple labor market data sets for time periods, various geographic areas, occupations, industries, and other key parameters. This custom, real-time labor market information data is available to users 24 hours a day, seven days a week.

Interactive Labor Market Data

O*NET codes, NAICS codes, and employer information come alive in vibrant maps, graphs, and reports displaying search criteria based on time periods, geographic divisions, occupations, industries, job listing sources, and employers. User-friendly controls create dynamic reports that can be generated on a monthly, quarterly, or annual basis. These reports can assist economic developers in pinpointing areas of weakness and positive trends for their state or region.
